

Turning Hospitality Data into Real-Time Intelligence

A Unified Intelligence layer across Reservations, Rooms, F&B, and Revenue

The Hospitality Intelligence Challenge

Hospitality businesses generate massive volumes of operational data every day across reservations, room occupancy, dining, inventory, pricing, and revenue. Yet this data often remains fragmented across property management and point-of-sale systems, slowing decision-making and limiting visibility.

KDAAPT unifies this data into a single, real-time intelligence layer designed for hospitality leaders and frontline teams.

KDAAPT integrates with Opera PMS

Opera manages reservations, guest profiles, room availability, and billing. Users interact through KDAAPT natural language queries and receive immediate insights tied to real operational drivers. KDAAPT connects directly to Opera to deliver:

Unified reservations & billing

Leakage: no-shows & cancels

Real-time booking trends

Stay behavior → pricing

Cross-property visibility

KDAAPT integrates with Symphony POS

Symphony drives food and beverage operations, sales, and inventory. KDAAPT enhances Symphony by providing:

Live F&B sales performance

High/low-margin items

Inventory usage & variance

Outlet/time/traffic analysis

Pricing anomalies & leakage

Features, Adaptability, and Value for Hospitality

Real-time + Predictive Intelligence that teams can act on immediately

Core KDAPT Capabilities

Conversational Analytics

Ask questions in natural language—get instant answers.

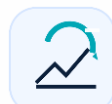

Cross-system Intelligence

Connects PMS, POS, ERP, Finance, CRM, databases, and APIs into one unified view.

Predictive Intelligence

Demand, staffing, and inventory forecasts you can trust.

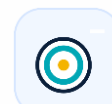

Real-time Insights

Rooms, F&B, and revenue—no waiting for reports.

Secure Access by Role

Executive to frontline—right insight, right time.

Goal-driven KPIs

Aligned to revenue and guest experience outcomes.

Forecast and Predict for Smarter Operations

KDAPT moves beyond reporting to foresight. Hospitality teams can anticipate occupancy fluctuations, predict revenue and margin trends, identify inventory shortages or overstock risks, and detect operational bottlenecks before guest experience is affected. Predictions are transparent and explainable, helping teams understand why trends are forming rather than just what may happen.

Built for Opera, Symphony, and Beyond

Extensible to PMS, POS, ERP, and finance systems (cloud or on-prem) via secure data interfaces.

Opera
PMS

Symphony

ERP / Finance

Other PMS/POS

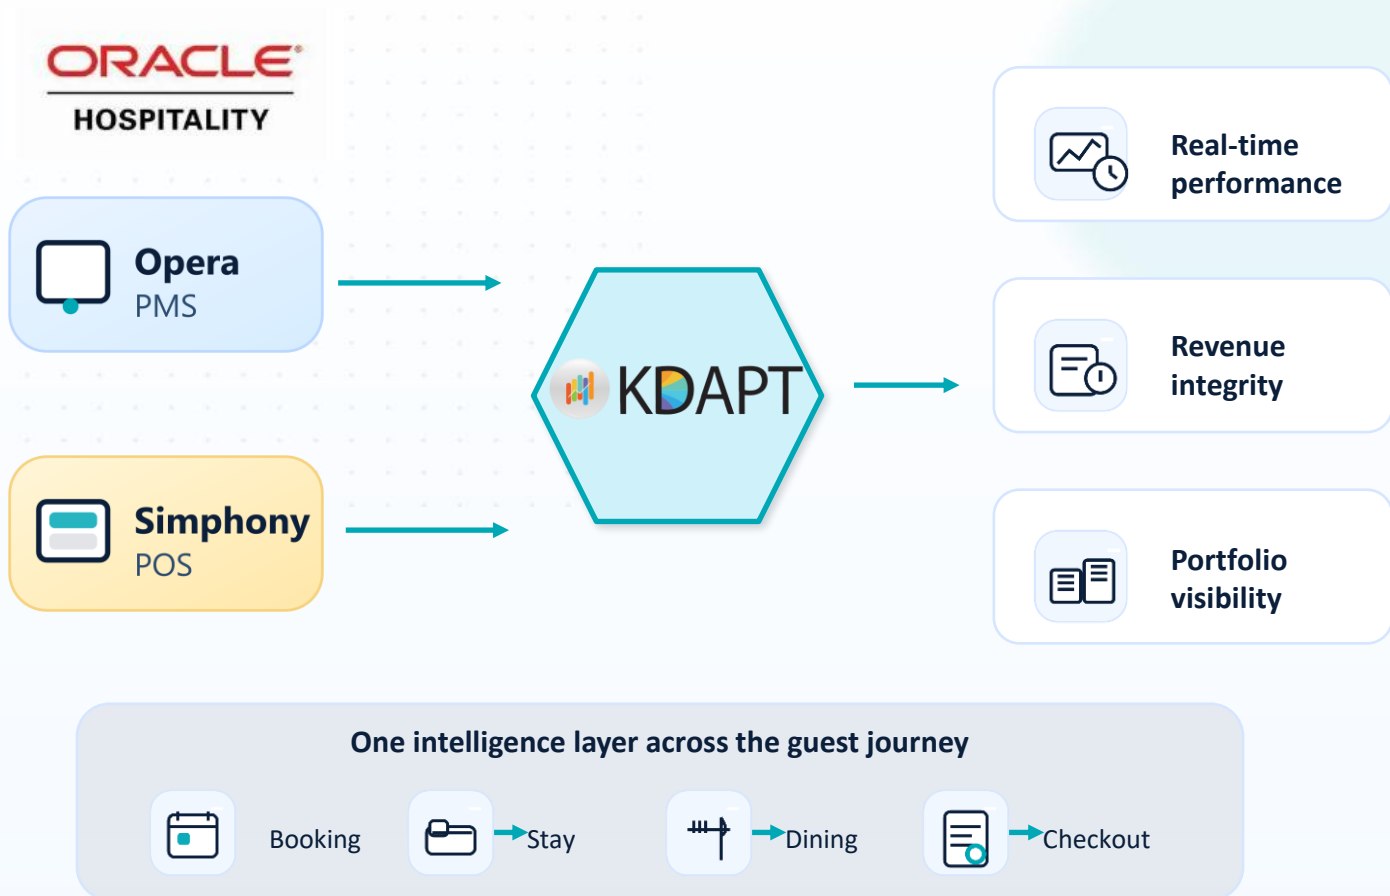

KDAPT integrates seamlessly with **Opera PMS** and **Symphony POS** and remains flexible enough to work with any property management system, point-of-sale platform, ERP, or finance solution. Whether systems are cloud-based or on-premises, KDAPT adapts easily to evolving hospitality technology environments.

Features, Adaptability, and Value for Hospitality

Real-time + Predictive Intelligence that teams can act on immediately

Unified Intelligence Across OPERA PMS & Symphony POS

Why KDAPT for Hospitality

KDAPT transforms hospitality data into actionable intelligence that drives faster decisions, enhances guest experiences, and maximizes profitability. It does not replace your systems. It makes them smarter.

Designed for Every Role in Hospitality

Executives gain real-time visibility into performance and strategic foresight. Revenue teams optimize pricing and yield decisions. Operations teams respond faster to on-the-ground challenges. Finance teams monitor revenue integrity and margin performance. Frontline managers act on insights in real-time without relying on analysts or technical teams.

It does not replace your systems. It makes them smarter.
